

ABSTRACT OF THE DISCLOSURE

Provided is a blood pressure meter cuff fastener having a function capable of switching between a winding length of a blood pressure meter cuff fastener in measurement of a blood pressure and a winding length of the blood pressure meter cuff fastener which is mounted for a long time other than measurement of a blood pressure with ease. A blood pressure meter cuff fastener has a first body section 102, a second body section 103 provided pivotably around a pivot section 142 on the other end side of the first body section 102 so as to be folded on the first body section 102, and a third body section 104 provided pivotably around a pivot section 141 on the other side of the second body section 103 from the side on which the first body section 102 thereof is provided so as to be folded on the second body section 103, and selection can be easily conducted of one of three states including a measuring winding length state, a non-measuring winding state and a mount/demount length state.
